

*Consider the significance of the hazard and whether it could be sufficiently controlled by prerequisite programmes. These could be routine or GHPs that require greater attention to control the hazard (e.g. monitoring and recording.)

**If a CCP is not identified at questions 2-4, the process or product should be modified to implement a control measure and a new hazard analysis should be conducted.

***Consider whether the control measure at this step works in combination with a control measure at another step to control the same hazard, in which case both steps should be considered CCPs.

****Return to the beginning of the decision tree after a new hazard analysis.

CODEX HACCP CCP Decision Tree 2023
